

DIY Phone Strap

xxx[♥]

Things you will need:

String, scissors, beads, ruler

How to make:

- Gather string, scissors and beads.
- Measure 60cm of your string and cut.
- Create a loop at the bottom ensuring that both ends are even.
- Tie a knot 2 inches from the bottom of your loop.
- With both ends together, thread your first bead.
- Then separate the two ends, and add the rest of your beads.
- When you have threaded enough beads to be two inches from the end of your string, tie both ends in a knot, pulling it tight.
- Tie both ends with a second knot and thread the remaining string back through the beads, tying knots intermittently until all of the string is used.

Boofle's top tips!

Purchase second hand beaded bracelets and reuse the beads for your phone strap.

Add a small amount of super glue to the double knot to prevent it from coming undone.
